

Randomized, Double-blind, Parallel-group, Placebo-controlled, Dose Ranging Study of Piromelatine in Patients With Mild Dementia Due to Alzheimer's Disease.

What if we could slow your loved one's Alzheimer's with better sleep?

If you or someone you care about has been diagnosed with mild Alzheimer's, local doctors need your help testing an investigational sleep-promoting Alzheimer's medication.

ReCOGNITION is a research study testing whether an investigational medication, which has sleep promoting effects, can help to slow cognitive deterioration, or improve cognitive function.

We need people to participate in this research study who:

- Are between 60 to 85 years of age
- Have been diagnosed with mild dementia due to Alzheimer's disease
- Have a permanent caregiver who is willing to attend all study visits

Qualified participants will be seen by a study doctor and receive all study-related exams, care and medications at no cost. Compensation may be available. Call 718-616-24900 or visit us on the web at www.spribrooklyn.com to learn more about this study.
